

Active Risk Manager

How would you like to see the bigger picture?

Active Risk Manager (ARM) is the world's most widely deployed and successful enterprise risk management system, comprehensively covering project, operational and corporate risk management. Used by global organisations from NASA to Nestle to Network Rail, ARM has played a key role in ensuring that major global projects are delivered on time and to budget.

Launched in 2001, ARM facilitates the communication of risk to the right people at the right time in a secure fashion.

How ARM can open your eyes

Active Risk Manager is highly configurable, offering a single software package that conforms to your risk management methodology across the enterprise rather than forcing one upon you. It has been designed with "ease of use" in mind, supporting individual users whatever their role, ensuring buy-in and facilitating free communication of risks and opportunities. ARM has the unique ability to consolidate multiple risk processes throughout the organisation, allowing risks from across multiple business units to be compared and reported in a consistent and timely fashion.

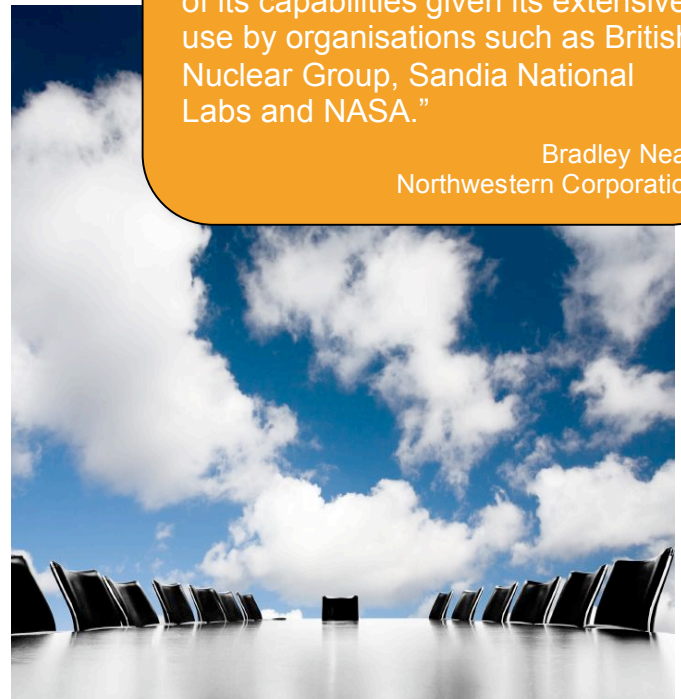

Using ARM to manage risk across your program or enterprise provides:

- **A consistent and reliable process**
- **Visibility of risks, controls & actions across multiple programs**
- **Roll-up & reporting of risks – make sense of your info & data**
- **Integration with leading project and portfolio management applications, such as MS Project, Primavera & Telelogic Doors**
- **Unrivalled Quantitative Analysis**
- **Comprehensive security and auditability enabling a pro-active and accountable approach to risk management**
- **Supports PRAM, PMIBoK, RAMP, BSS6079 amongst others.**

This bigger picture, the aggregation of all relevant data, allows you to identify themes and issues (common risks or opportunities) across all your projects and programs that would not be apparent if you were analysing risk in silos.

"Active Risk Manager has the largest deployment of users across multiple industries both public and private worldwide. We feel confident of its capabilities given its extensive use by organisations such as British Nuclear Group, Sandia National Labs and NASA."

Bradley Neal,
Northwestern Corporation

Strategic Thought Group

Strategic Thought Group is based in London and operates globally. Our main markets are in the EU and the North America and we have an office in Washington DC. We deliver world-class enterprise risk management solutions, as well as integration consultancy to FTSE 100 and Fortune 1000 companies.
